THE COMPANY IN CHARGE OF ASHSCAN DEVELOPMENT

MapleDevs

MapleDevs is a Canadian-based company specialized in the provision of computer and technology services, whose main mission is to provide its partners with leading-edge technology to enable them to realize the full potential of their activities, while providing them with clear and direct access to the data generated by the company's software. With its potential and the competence of its team, it offers its partners a wide range of services, including the design, development and deployment of applications, websites and various platforms. It also develops innovative technological security methods and systems for their implementation.

(1) Présentation

ASHSCAN is an Electronic Document Management solution that allows the complete document management of a company's files. The software is similar to an electronic storage space that makes files accessible online to some or all employees within the organization. Several types or formats of documents can be shared and stored online.

ASHSCAN provides users with practical solutions in terms of:
* Scanning and archiving via ocerization;
* Full-text" search engine;
* Digital signature and QR code;
* Data exploitation algorithm.

(2) Objectifs

The ASHSCAN ASHSCAN solution addresses the issue of document digitization and archiving through the objectives presented below:

* Optimization of data exploitation;

* Facilitation of data access measures;

* Transformation of data from physical media into digital data;

* Security of system information;

* Management of access rights.
